New and enhanced features for faster drafting, documentation, and collaboration

Trace

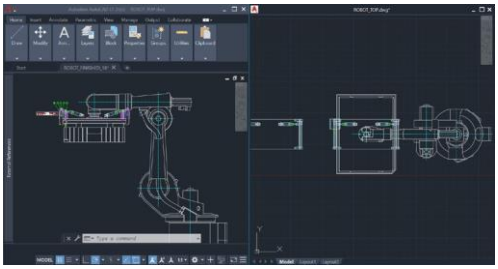
Collaborate with your teammates more quickly and securely. Trace enables you to safely add feedback to a DWG file without altering the existing drawing. Add feedback in the AutoCAD web or mobile apps and view them across desktop, web, or mobile platforms.

Share

Share allows you to send a controlled copy of your drawing to teammates and colleagues to access wherever they are. Establish access for those who need editing capabilities versus those who only need to view the file. Share your drawings more easily and securely.

Count

Automate counting blocks or geometry with the COUNT command to speed up documentation tasks and reduce errors. Counting can be done by layer, mirror state, or scale. Counts can be easily updated and exported to a dynamic table.



Push to Autodesk Docs

Generate PDFs faster and with fewer clicks by publishing your CAD drawing sheets as PDFs directly from AutoCAD LT to Autodesk Docs. Plus, you can access your DWG files in Autodesk Docs anywhere with the AutoCAD web app.

Floating windows

Pull away drawing windows to display multiple drawings side by side or on separate monitors without opening another instance of AutoCAD LT. Each window is fully functional for viewing or editing.

Redesigned Start Tab

The new AutoCAD LT start tab allows you to easily access files and other helpful content directly from the home screen.

Customizable installation

Reduce the amount of time setting up your software with faster and customizable installations. Start working even while the program is being installed.

Performance enhancements

Experience faster performance in AutoCAD LT including when plotting.

Protect your designs with TrustedDWG technology

Help retain the integrity of your design data throughout the review process with TrustedDWG™ technology. Built into AutoCAD LT software, TrustedDWG is the original, most efficient, and most accurate way to store and share design data. TrustedDWG files maintain each element in a drawing and the relationship between elements with data fidelity.
